

Home Page

- Above search bar, put a class disclaimer
- Logo on the top left instead of the word home
- Top right or next to about, have a button called post sharing or create post
 - Always have it on the website so it tells users that you can post content
- Have recent posting/ telling something about the site “welcome to the site where faculty and students can post school content”
 - Nothing on the website telling you what it does
- Have categories matching the same as the bottom
 - Have some check boxes that describe the type of content at the bottom of the search bar

Search Page

- Put ‘30 out of 30 results’ on the left and make it more visible
 - Put the stuff from the home page at the bottom of the search bar into the actual search page
- Keep code consistent
- Tell what item type it is
- Have the download button if it is free and contact button if it is purchaseable
- Because of privacy, we want some kind of messaging rather than just giving out the phone number or email
- Search results are good, describe what type of media that it is
- Right hand side under the bar we can have some filters
- Visually, we should have some line bar or change the color of the navbar
 - Have kind of a split between the navbar and the actual page

Login page

- Good

Register Page

- Do some kind of captcha
- Put the * denote required field under the title

Create Post

- Make the fields smaller, make it about the same size as people expect the field should be
- If you have time, put description before upload
- make the file stuff at the end
- Put required field at the top
- Left of create post should be cancel, right side should say “24 hours to approve”

“So far pretty good ;D” -Petkovic 2020

Database tables

- Users good

- Should also have media type for post
- In post, mandatory field is category
- User who uploads data should determine the category

GitHub

- Example: 'syntax errors' what errors please be more specific with github comments
- Example ' another fix on nav bar' instead do 'nav bar fix'
- People look at your github comments
- Search algorithm is working. Good.

Code Review

- Variables reasonable
- Put the name of the developer in the header comment
- Occasionally have a one line comment here and there for unusual stuff
